HxGN GeoCloud, powered by HxDR

Let your work flow through the cloud

HxGN GeoCloud is a cloud-based collaboration portal powered by HxDR, Hexagon's cloud-native platform for geospatial solutions at any scale. As an expanding service suite, HxGN GeoCloud offers services that make your daily workflows with data and sensors more efficient.

GeoCloud Drive is the first service within the HxGN GeoCloud service suite enabling streamlined data transfer and cloud storage. Direct integration with Leica Captivate allows seamless data transfer and the automatically synchronised data is accessible with any Windows office software, including Leica Infinity. GeoCloud Drive ensures data is always up to date everywhere, minimising rework and granting peace of mind.
